

21+ YEARS TOTAL EXPERIENCE	12 YEARS FOUNDATION (VISUAL & UI)	9+ YEARS RECENT (UX & PRODUCT DESIGN)	AI-DRIVEN FULL-STACK PROTOTYPING
--	---	---	---

I single-handedly drive products from initial UX architecture to fully functional, deployed software. I do not stop at UI design. By orchestrating AI agents as my engineering team, I translate complex user needs and business logic into production-ready frontends, robust backends, and complete platforms. Because I hold the clear structural vision and know exactly what the product must achieve, I direct the AI to execute the technical heavy lifting - bridging the gap between human design intent and final, shipped software.

PROFILE

Strategic Product Designer and Toptal Vetted Designer with 21+ years of design experience (9+ in Enterprise UX), working as a freelancer with Toptal and global enterprise clients. Proven track record of translating complex business goals into intuitive SaaS solutions, notably achieving a 15% uplift in partner satisfaction for Google and Cisco networks at Geni/TenXengage. I uniquely bridge the gap between design and engineering by orchestrating AI tools (Claude, Gemini) to accelerate sprint delivery, ensure rigorous design QA, and ship production-ready enterprise platforms like SmartBI.

EXECUTIVE VALUE PROPOSITION

Complexity into Clarity Transforming multi-layered enterprise workflows and data systems into intuitive, user-centered product experiences proven across Google and Cisco partner ecosystems at global scale.	End-to-End Product Ownership Driving the full product design lifecycle - discovery, user research, structural IA, interaction design, prototyping, and validated delivery - with UX architecture as the foundation.	Business-Product Alignment Translating stakeholder visions, user research, and business KPIs into product strategies and measurable outcomes. 15% verified satisfaction uplift delivered across partner portals.
AI Product Design Leadership Architecting human-in-the-loop AI product experiences - conversational interfaces, LLM-powered workflows, and intelligent UX systems (SmartBI, Sentinel, Tracto).	Research-Led Product Decisions Every product design decision grounded in real user behavior. Research insights drive roadmaps, feature prioritization, and validated interaction models.	Agile Product Delivery Designing within sprint cycles, contributing User Stories, Acceptance Criteria, and sprint-ready specifications. Agile fluency as a delivery advantage, not a separate discipline.

CORE COMPETENCIES

End-to-End Product Design - Discovery, user research, IA, wireframing, prototyping, design QA, validated delivery - Human-centered design lifecycle - from first insight to shipped product - UX architecture embedded in product thinking - structure before surface - Rapid ideation, concept validation, and iterative design refinement	AI Product Design - Conversational UX and natural language interface design (SmartBI) - Human-in-the-loop product architecture for LLM-powered enterprise systems - AI workflow integration - Antigravity, Gemini, Claude, Codex, Framer
User Research and Validation - Contextual inquiry, stakeholder interviews, field user research - Usability testing, heuristic evaluation, competitive landscape analysis - Journey mapping, persona creation, empathy mapping - insights to roadmaps	Enterprise Product Strategy and Craft - B2B SaaS product design - multi-role, enterprise-scale, partner ecosystems - Stakeholder alignment and business-to-design translation - Component libraries, design tokens, Figma-based systems architecture - KPI-driven design outcomes - 15% partner satisfaction uplift achieved - Agile UX Delivery - sprint-integrated design

AI UX TOOLKIT AND PRODUCT DESIGN METHODOLOGY STACK

UX & ARCHITECTURE TOOLS

Figma (IA mapping, flows, component systems), Framer (interactive prototyping), Miro (journey mapping, structural workshops), Sketch, Anima

AI ORCHESTRATION

Antigravity, Gemini, Claude, Codex, Open Design, Google Stitch, Google AI Studio, UX Pilot

AI-AUGMENTED WORKFLOWS

Using Claude, Gemini and Antigravity for IA synthesis, journey map generation, user story drafting, acceptance criteria writing, and design documentation acceleration

AI-ASSISTED DEVELOPMENT

Translating UX architecture into fully functional applications and production-ready code across any tech stack by orchestrating AI agents, bridging the gap between design and technical execution.

RESEARCH & UX FOUNDATIONS

Prompt Engineering for UX Research, WCAG 2.1 Accessibility, HCD, Design Thinking, Lean UX

FRAMEWORKS

Human-Centered Design, Information Architecture, Design Systems, Lean Product Lifecycle, Agile UX Integration

ENTERPRISE PRODUCT DESIGN - FEATURED WORK

Asparz
UX Consultant & Architect

Enterprise SSL Management SaaS

Led deep-dive UX research and architected an actionable dashboard for IT administrators, simplifying dense cryptographic data. Designed predictive alerting mechanisms and streamlined renewal workflows, drastically improving data visibility and platform adoption.

Govt Guest Booking
AI Product Architect

100% AI-Driven Platform Development

Architected and deployed a fully functional booking platform by utilizing AI as an integrated engineering partner. Bridged the gap between UX vision and technical execution by orchestrating AI to generate a functional frontend, robust backend logic, and complex RBAC systems, proving design feasibility at scale.

Design OS for AI
Conceptual Framework

Knowledge Engineering

Pioneering a conceptual framework to transfer high-level human design intuition into AI models. Systematically teaching human-centered design to AI agents, translating complex design principles into structured, programmable logic for autonomous architectural decisions.

tenXengage
UX Architect

Workflow Redesign (Cisco & Google)

AI predicted business outcomes, but users still faced 40+ manual steps. Diagnosed the cognitive load gap, restructured the UX architecture, and delivered wireframes to redirect AI assistance directly to the creation flow.

Outcome: 30% engagement rise, 22% support cost drop, 20-25% ticket reduction.

VIEW CASE STUDY | uxsayantan.com

SmartBI
Lead UX Architect

Antigravity, Gemini, Claude, Google Stitch, Figma

Architected an enterprise conversational AI platform that translates complex SQL queries and multi-layered data into an intuitive natural language interface. Designed the human-in-the-loop verification layer, data transparency architecture, and zero-trust security UX compliance model for non-technical enterprise stakeholders.

SYSTEMS THINKING

Feel the experience

TRACTO
Lead UX Architect

Connected Healthcare Network

Designed a data-driven safety and health monitoring ecosystem for elderly care. Mapped real-time biometric streams to cognitive safety triggers, establishing glanceable, high-contrast dashboard interfaces engineered specifically for low-literacy and low-tech-proficiency users.

PROFESSIONAL EXPERIENCE

Toptal Network & Independent Practice

Jan 2020 – Present | Remote

Lead UX & AI Product Architect / Senior Product Designer

Vetted into Toptal's exclusive top 3% network. Delivering enterprise SaaS architecture, AI-augmented product design, and full-stack software delivery for global clients and high-growth ventures.

- **Toptal Vetted Freelance Scope:** Selected into Toptal's exclusive top 3% global freelance network, executing complex enterprise SaaS architecture, interaction models, and end-to-end product design for high-growth global clients.
- **Toptal Client Engagement — Connected Healthcare Network (Tracto):** Architected real-time biometric telemetry mapped to automated safety triggers and designed glanceable, high-contrast dashboard interfaces engineered for low-literacy and low-tech users (client identity protected under NDA).
- **Independent Client — Asparz (Enterprise SSL SaaS):** Led deep-dive UX research and architected administrative dashboards for complex cryptographic data, implementing predictive alerting mechanisms and renewal workflows to elevate data visibility and platform adoption.
- **Independent Client — Govt Guest Booking Platform:** Single-handedly architected and deployed a multi-tiered booking platform by orchestrating AI agents for full-stack delivery—driving dynamic UI/UX, robust backend logic, and fine-grained RBAC systems.
- **Internal Framework — Design OS for AI:** Developing structured methodologies and prompt architecture to translate human-centered design intuition into programmable logic for autonomous AI agents, shifting AI from code generator to strategic design partner.

TenXengage

Oct 2023 - May 2026

Sr. UX Designer > UX Architect

Note: Geni restructured into TenXengage in Oct 2023. Same founding team, clients (Google, Cisco), and projects continued. Formally elevated to UX Architect in recognition of systems architecture responsibilities handled since joining predecessor entity Geni.

Strategic UX Architect leading end-to-end user experience and interaction design within Google and Cisco partner networks, engineering scalable B2B frameworks through rigorous Agile collaboration.

ENTERPRISE UX & ARCHITECTURE

- Applied systems thinking to map and optimize complex B2B SaaS workflows across Google and Cisco partner ecosystems, defining intuitive navigation models, data schemas, and platform-wide information architecture that scaled across global implementations.
- Directed overarching UX strategy for multi-regional partner portals, establishing structural design standards and governance frameworks that unified experience quality across all partner-facing touchpoints.
- Led end-to-end user research and journey mapping initiatives, translating behavioral insights and field observations into concrete architectural blueprints, feature roadmaps, and validated interaction models that drove measurable reduction in task completion friction.

TECHNICAL UX & AGILE COLLABORATION

- Facilitated engineering feasibility reviews at design inception, aligning UX proposals against API constraints, technical dependencies, and systemic limitations before committing to sprint scope, eliminating late-cycle redesign loops.
- Translated complex UX layouts and multi-state user flows into refined sprint backlogs, well-structured User Stories, and precise Acceptance Criteria ensuring engineering teams had unambiguous, dev-ready specifications at every handoff.
- Maintained design integrity across the full sprint lifecycle by proactively resolving cross-functional UX dependencies, clearing blocking issues, and conducting design QA reviews prior to release.
- Served as the primary interface between business stakeholders and engineering teams, protecting the user vision during implementation while aligning delivery against business KPIs and sprint velocity.
- Acted as Agile champion across cross-functional pods, facilitating sprint planning, daily stand-ups, retrospectives, and sprint reviews while simultaneously owning the design backlog.
- Integrated AI tools (Claude, Gemini, Antigravity) into sprint workflows, generating draft user stories, acceptance criteria, and sprint retrospectives, cutting documentation time and accelerating backlog readiness.

Note: Predecessor legal entity to TenXengage (uninterrupted employment with same team, clients, and projects). Performed UX Architect & Researcher duties throughout under the title Sr. UX Designer.

ENTERPRISE UX & ARCHITECTURE

- Architected information structures for complex B2B SaaS partner portals across Google and Cisco ecosystems, defining end-to-end navigation models, data schemas, and content hierarchies that formed the structural backbone of multi-role platform experiences.
- Established foundational UX strategy and design standards across partner-facing platforms, creating structural frameworks, pattern libraries, and governance guidelines that ensured consistency and scalability across global rollouts.
- Led comprehensive user research initiatives (contextual inquiry, interviews, card sorting, tree testing) and journey mapping workshops, transforming qualitative findings and behavioral metrics into validated architectural blueprints and experience frameworks.

TECHNICAL UX & CROSS-FUNCTIONAL EXECUTION

- Conducted engineering alignment sessions at design inception, evaluating UX proposals against technical feasibility, API structures, and platform constraints to eliminate costly late-cycle rework.
- Translated complex interaction models and multi-state user flows into structured design specifications, user stories, and acceptance criteria providing engineering teams with unambiguous, sprint-ready handoff documentation.
- Maintained design integrity across delivery cycles, resolving cross-functional dependencies, conducting design review checkpoints, and ensuring implementation fidelity against original UX intent.
- Functioned as the bridge between business stakeholders and engineering, translating strategic goals and user needs into a shared delivery language, protecting the user vision through every sprint.

- Architected an AI-driven corporate travel and forex solution platform, simplifying complex business logic into frictionless, linear screen architectures through iterative wireframe cycles.
- Collaborated within an Agile delivery structure where daily syncs, sprint demos, and retrospective-driven design iterations reduced rework across engineering sprints.

- Executed end-to-end UX strategy for a diverse B2B SaaS portfolio, managing design sprints grounded in intensive user research and core business KPIs.
- Led stakeholder alignment sessions that translated abstract product visions into structured user stories and sprint-ready low-to-high fidelity prototypes.
- Coordinated cross-disciplinary teams (design, development, QA) through Agile-style delivery loops, reducing post-sprint design revision cycles significantly.

- Managed design output for multi-client product teams, translating abstract client visions into comprehensive user stories, dev-ready prototypes, and sprint documentation.
- Established design review cadences aligned with sprint ceremonies, preventing implementation drift and reducing engineering rework.

- Conceptualized the Main Game Table interaction model, optimizing interaction patterns iteratively through rapid usability cycles to minimize cognitive load for millions of concurrent users.

CAREER EVOLUTION (2003-2012)

HurixDigital Lean UI Designer (2011-12)	RoyTech Solutions UI Manager (2008-11)	Freelance Visual Identity (2005-08)	Aforeserve.com Jr. Web Designer (2003-05)
---	--	---	---

PROFESSIONAL CERTIFICATIONS

- **IIT Roorkee** - Executive Postgraduate Certification in UI/UX Design (2024-25) - cognitive psychology, enterprise navigation frameworks, data display mechanics.
- **Arena Animation** - Professional Diploma in Web Design and Multimedia
- **IxDF Certifications** | Profile: ixdf.org/members/sayantan-ghosh
- AI for Designers Professional Certification (2026) - AI orchestration, LLM prompt refinement, human-in-the-loop UX.
- Perception and Memory in HCI and UX - cognitive load principles applicable to complex interface design.

EDUCATION

- **D.D.U. Gorakhpur University** - Bachelor of Arts (B.A.), 2005
- **West Bengal Council of Higher Secondary Education** - Commerce Stream (10+2), 2001
